Clariti Eyewear Collection

Lightweight Eyewear & Sunwear

1. MYKITA

The new Decades sunglass line is characterised by a rendering of large panto forms to MYKITA's ultralight flat-metal concept. The 0.5 mm stainless steel frames appear as a silhouette of their historic predecessor and, in combination with the frame colors, create their own unique look. www.mykita.com

2. Evatik

The Evatik 9053 is a full rim titanium men's model. The combination of flat sheet titanium coupled with a thinner profile on the bottom of the eyerim provides a sleek, modern look to this model. Thin titanium strips are cut out of the endpiece and incorporated into the temple pattern adding texture to the design. www.evatik.com

3. Pro Design

The Axiom collection is all about simplified functionality and this new addition to the successful fifth branch under the ProDesign name is no exception. The striped acetate of the end tip is a classic ProDesign acetate, and both the colors of the fronts and the temples are repeated in the end tip pattern. www.prodesigndenmark.com

prodesign : denmark

Combining the best in design, ground-breaking techniques, and high-tech materials, **LIGHTWEIGHT EYEWEAR** have super strength and flexibility. There are so many possibilities in selecting these frames for your patients.

4. Viva International Group

The new styles from Harley-Davidson Eyewear are solidly constructed and designed with clean lines and subtle logo treatments. Key materials include stainless steel, as seen in model HD 422, from the men's ophthalmic collection. This lightweight material delivers a slim profile, while showcasing the Harley-Davidson Bar & Shield logo laser-etched on both of the temples. www.vivagroup.com

5. Silhouette

Titan Minimal Art is one of the most successful rimless eyewear collections in the world. Free from rimmed frames, hinges, and screws, it started a revolution in the world of eyewear. Its light weight of only 1.8 grams offers wearers carefree, limitless vision for the first time ever. www.silhouette.com

6. Studio Optyx

Monoqool's patented Helix temple design equips a lightweight stainless steel frame to create a screw-less frame. The frame weighs only 4 grams. www.monoqool.com, www.studiooptyx.com
